## DETAILED ACTION

### EXAMINER'S AMENDMENT

1. This application is in condition for allowance except for the presence of claims 43 to 58 non-elected without traverse. Accordingly, claims 43-58 have been cancelled.

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Joseph A. Rhoa on May 13, 2004.

The application has been amended as follows:

1) In claim 1, line 13, "...an uneven section formed in/on said charge collection electrode, ..." **has been changed into** - - ... an uneven section formed in/on said charge collection electrode in an area not in contact with an active element, . . . - -

2) In claim 13, line 16, "... an uneven section formed in/on said charge collection electrode, ..." **has been changed into** - - ... an uneven section formed in/on said charge collection electrode in an area not in contact with said active element, . . . - -

***Allowable Subject Matter***

1. Claims 1-42 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record neither discloses nor teaches an electromagnetic detector comprising various elements as claimed, more specifically, as the following:

an uneven section formed in/on the charge collection electrode in an area not in contact with the active element, and dedicated for use in reinforcing a bonding strength between the semiconductor layer and the charge collection electrode, and the uneven section being composed of at least a concave or convex part, and as shown in Fig.1  
[claims 1, 13 and 28]

The closest reference is the applicant admitted prior art and an article of "A new digital detector for projection radiography" (Lee et al) that discloses an electromagnetic detector, but the prior art of records do not disclose that the charge collection electrode having uneven section (convex or concave) in an area not in contact with the active element for use in reinforcing a bounding strength between the semiconductor layer and the charge collection electrode.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
